SUBJECT AND AUTHOR INDEXES

Volume 13, June 1979—March 1980

Preface

Primary headings in the subject index include pesticide compounds, media in which pesticide residues are monitored, and major concepts related to the monitoring of pesticides in the environment. Pesticide compounds are listed by common names; trade names are used for those which have no common names.

Secondary headings cross-reference the primary headings.* For a paper which discusses five or more organochlorines or organophosphates the compounds are grouped by class under media and concept headings but each compound appears individually under the primary headings for pesticide compounds.

In the author index all information on a paper appears in the senior author's citations: associate authors, title of the paper, and volume, issue, and pages where the article was published. Names of associate authors are cross-referenced as minor headings, but the reader is referred to the senior author's entry for the paper's complete citation.

* Note: With the exception of 13(3):87-98 in which no compounds are used as secondary headings. Each compound is listed as a primary heading with Food as its only secondary heading.

SUBJECT INDEX

A

Alachlor
Factors Influencing Residues
